Vaughn Rental Program... All Inclusive, You're 100% Covered

No hidden fees or bills...Just worry free water heating.

Tank Sizes Available in 50 & 80 Gallon Capacities

VALUE

Vaughn's cement lined water heaters are built to last and resist failure; this quality means you do not have to worry about waking up to a flooded basement or the costly insurance claims that can occur with glass lined tanks. Due to our efficient design and lower heat loss, many of our customers with larger tanks report continued hot water service, even in the event of an extended power outage.

DEPENDABLE TURN KEY PROGRAM

We bill you a low monthly fee and you will have hot water for life. Anytime the tank needs repair, call our convenient toll free number and we will get a qualified contractor to your home to quickly get you back in hot water at no additional cost and no deductible. If the tank needs replaced, you're still covered. You don't have to worry about finding a contractor to come to your home or how much it will cost to repair the tank, you are covered with Vaughn Thermal's Rental Program.

RELIABLE, WORRY-FREE SERVICE

Thanks to our concrete lined steel tanks, you never have to worry about a tank rupturing and flooding your home like other water heaters can. Our plastic jacket will not rust, scratch, or dent which eliminates maintenance. As Vaughn's tank construction does not require an anode rod, you'll never have to deal with the "rotten egg" smell that is associated with an exhausted anode rod.

We have over 50 years of experience supplying and managing water heater rental programs.
