Seamless HydraStone® lining provides long tank life

All bronze fittings at all six tappings eliminates corrosion due to dissimilar metals

No dielectric unions required

- Extremely tolerant to hard water supplies
- Industry leading 5 year tank warranty
- Hand hole clean-out option allows for easy inspection and cleaning of bottom of tank

HydraStone Lined Range Boiler

The Vaughn range boiler combines a HydraStone lining and heavy gauge steel for an effective, long lasting and reliable Range Boiler. The tank can provide a large volume of hot water, depending on tank size, by using a separate hot water tank which is connected to a heating boiler as well as to domestic hot water piping in a home. Water circulates from inside the range boiler tank through a heat-exchange coil that may be internal or external to the heating boiler. This is the perfect tank to use in conjunction with your wood cook stove or heater.
